## A comprehensive, unified path for the CMS application

The journey to launch a Medicare Advantage provider network begins with a single step: the CMS application. Unfortunately, that step is often fraught with inefficiencies, errors, and miscommunication. androsPathway* is here to provide healthcare organizations with a singular, step-by-step collaborative workflow tool designed for gathering and managing data on the path to approval.

Built for any size healthcare organization

The beauty of androsPathway* is that it takes all healthcare organizations into account. Regardless of the size or maturity of your network, this cloud-based tool is designed to adapt to your unique needs.

First-time CMS applicants will find an easy-to-use, comprehensive system—a "process in a box"—that eliminates redundant or disparate systems, organizing all relevant materials in one place.

Clients with multiple applications will benefit from a singular point-of-entry technology that shares responses and documents across contracts, saving busy teams valuable time and resources.

Whether you're building a new Medicare Advantage provider network or expanding an existing one, androsPathway* is here to help you achieve CMS approval.

How androsPathway* gets you across the finish line

Increases efficiency: androsPathway* provides a single point of interaction that enables disparate teams to share, approve, and manage attestation responses and supporting documentation. Real-time progress reporting helps easily identify and assign next steps, and the completely cloud-based system makes historical submission records available for reference in future applications.

Improves communication and collaboration: androsPathway* creates a unified platform that connects all teams. It easily assigns tasks and responsibilities and generates comprehensive dashboards to manage the application process in one place. A fully transparent comment, response and approval process keeps all team members on task and helps avoid any threats to approval.

Quality and compliance check: androsPathway* uses a two-assignee methodology to ensure accountability and quality. By tracking all tasks in one place—complete with a full audit trail—the system reduces the possibility of missed steps or incomplete documentation. Manage as many or as few of the steps along the way as you like. It's all up to you.

With affordable, scalable packages designed to serve all healthcare organizations, androsPathway* is the tool you need on your journey to CMS approval.
