Plans, providers, and patients win with andros + Madaket

Enrollment and credentialing in one fell swoop

Creating healthcare networks is a complicated process. First, you build networks and recruit providers. Then providers enroll and submit their credentials, requiring payers or third-party vendors to validate them. Billing and reimbursement places additional administrative burdens on both providers and payers.

The process is fragmented, time-consuming, and fraught with the potential for error and delay. andros and our partner Madaket Health solve these problems for payers and providers alike.

Two platforms, one process

We view network enrollment and credentialing as two sides of one coin. Our technologies interlink in a single, holistic process allowing health networks to deliver a streamlined experience for all stakeholders, plans and providers.

Simplifying recruiting and contracting

Recruiting providers takes expertise, time and effort: data and analytics to find enough providers to meet patient needs; follow-up calls and emails to recruit them; and logistical efforts to gather and process contracts. andros + Madaket eliminates friction with deep provider data resources and optimized recruiting processes.

Streamlining enrollment for providers

Enrolling in a health network is the very definition of burdensome administration. With andros + Madaket, rapid credentialing and EDI verification eliminate delays preventing providers from seeing patients.

Gets you in-network and reimbursed faster

NCQA-compliant credentialing

Enrollment integration with 4,000+ payers
